NOTE: Do not use the 0.5 mm thickness Permacol™ surgical implant in load-bearing applications.

NOTE: Permacol™ collagen injection is designed for permanent implantation in humans and is indicated for soft tissue repair/reconstruction in cases in which increases in bulk are required to improve function (e.g., as urethral bulking agent to improve continence) or to improve form (e.g., as an adjunct to plastic/reconstructive surgery to improve surface cosmesis).

NOTE: Permacol™ collagen paste is intended to reinforce soft tissue in cases in which filling is required, such as to repair fistulas, including anal and rectal fistulas.
